

BACK PULL OUT KITS FOR 340 SERIES END SUCTION PUMPS

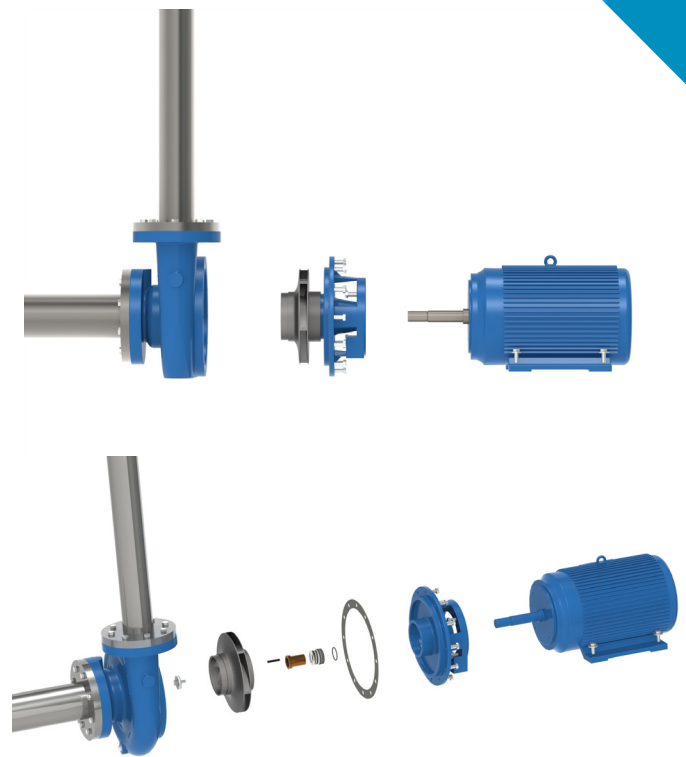

Pentair Aurora Back Pull Out Kits provide a convenient solution for parts replacement on 341 and 344 model end suction pumps. A standard kit for 1" to 6" bronze-fitted pumps is in stock and available for quick delivery. Other configurations can also be quoted by Application Engineers based on availability. Back Pull Out Kits offer genuine OEM replacement parts, comprised of everything needed to refresh a pump back to original factory conditions.

Disassembly of the existing pump only requires unbolting of the bracket while the casing remains mounted and piped to the building, leaving suction and discharge piping untouched. The new factory-assembled OEM unit can then be inserted into place and bolted on.

Simplified for Quick Installation

Utilizing the Aurora BPO Kits can lead to significant time and cost savings through reduced labor and downtime. The installation process for Back Pull Out kits is designed to be quick and painless. With the simple disassembly process, pump replacement can be performed by maintenance personnel or contracted plumbers.

By replacing the entire OEM unit, labor is greatly reduced. Previously, a typical replacement would require extensive field labor, where the pump is put on a workbench, the impeller is removed and components are sanded down. This could lead to pump downtime of a day or more. With Back Pull Out Kits, the genuine OEM parts are meticulously prepared at the factory, so when it arrives at the site you can be confident all the necessary parts are included and changeout is quick and efficient.

Extending Pump Life

Back Pull Out Kits for Aurora end suction pumps are a winning solution for increasing the longevity of worn pumps. The factory-assembled kits allow for quick, efficient rebuilding of a pump, restoring to original conditions with genuine OEM parts. The simplified ordering process and availability of standard bronze-fitted models make the use of BPO kits an easy decision for distributors and end users alike. Contact your Distribution Center or Regional Sales Manager for more information on this exciting offering.

Efficient Ordering Process for Quick Delivery

Back Pull Out Kits can be easily ordered through the Encompass Parts module with a minimum of three clicks. The ordering process begins with selection of open or closed coupled models, followed by pump and power frame sizes. The inclusion of a motor is an additional option, but is automatically selected in Encompass for models where it is required. Further parameters such as efficiency, voltage, RPM's and frequency can be entered or verified based on preselection in Encompass.

The nameplate on existing Aurora 340 Series pumps will provide the necessary information to order a replacement Back Pull Out Kit.

Ordering a Back Pull Out Kit on Encompass is a quick, intuitive process designed to accelerate pump replenishment. Comprehensive list price pages are available to accompany the Encompass ordering interface. Training modules will be offered to help familiarize users with the process, allowing them to take full advantage of the Back Pull Out program.
